MSA have new representation in the US

Published: 19 August, 2008

MSA Engineering Systems are enjoying renewed interest in their hand-held test instruments due to new representation in the United States from Heights USA.

The facility, based in Trenton, New Jersey, is equipped to supply and provide support for MSA's ST300 Softness Testers and SG300 Substance Gauges, including dedicated calibration for the ST300. Stock is held stateside so there are no international shipping costs for US customers.

For more information on new equipment, or recalibration of existing instruments, contact tim.philburn@heights-usa.com in the US or the company's UK sales office on sales@msa-engineering.co.uk.
